

Sequences 404, 10 CPUS. Likelihood is computed 100 times with the same (parsimony) tree topology using libpll

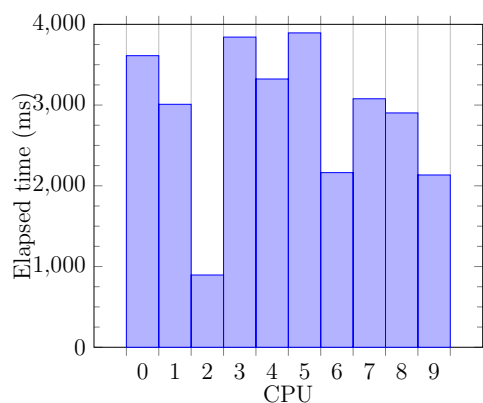

Figure 1: Elapsed time to compute the likelihood, without site repeats, with Kassian's load balancing

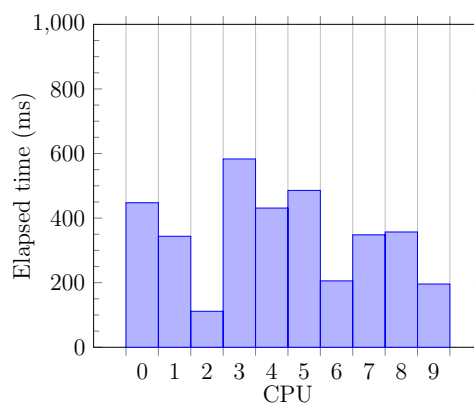

Figure 2: Elapsed time to compute the likelihood, with site repeats, with Kassian's load balancing

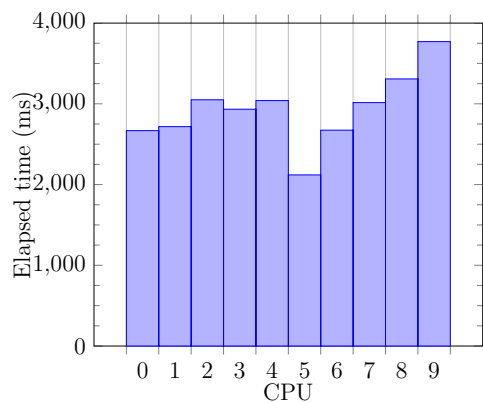

Figure 3: Elapsed time to compute the likelihood, without site repeats, with Weighted's load balancing

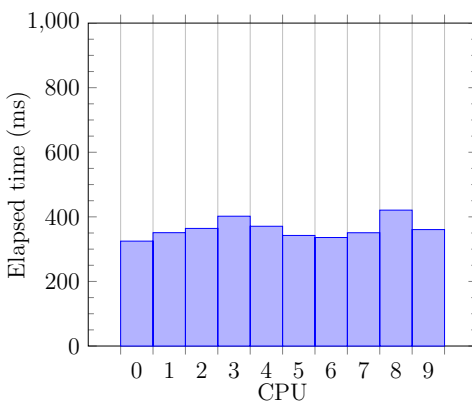

Figure 4: Elapsed time to compute the likelihood, with site repeats, with Weighted's load balancing
